1. Coding's.....	5
1.1 Tested:	5
1.1.1 Save AirCare setting [SFD: no]	5
1.1.2 Automatically reduce seat heating to a lower level after a certain time [SFD: no].....	5
1.1.3 Save recirculation setting [SFD: no]	5
1.1.4 Enable fan levels „gentle“, „medium“ and „intensive“ [SFD: no].....	5
1.1.5 Save seat heating settings [SFD: no]	6
1.1.6 Change light functions based on light sensitivity [SFD: yes]	6
1.1.7 Save high beam assistant settings (on ignition change) [SFD: yes]	6
1.1.8 Activate adjustable daytime running lights in the car menu [SFD: yes]	6
1.1.9 Adjustable DWA acknowledgement ton in the car menu (lock and unlock) [SFD: yes]	6
1.1.10 Enable automatic central locking in the car menu [SFD: yes].....	7
1.1.11 Deactivate warning sound when opening the door with ignition [SFD: yes]	7
1.1.12 Dim ambient lighting to a higher level [SFD: yes]	7
1.1.13 Rear lights as daytime running lights [SFD: yes]	7
1.1.14 Deactivate rear windows wiper intermittent wipe function [SFD: yes]	7
1.1.15 Automatic door unlocking when DSG is in park position [SFD: yes]	7
1.1.16 Activate cruise control (No distance regulation) [SFD: no] [Login Code: 20103]	7
1.1.17 Disable prevention of overtaking on the right (ACC) [SFD: no] [Login Code: 20103]	7
1.1.18 Adjust ACC 1 km/h increments [SFD: no] [Login Code: 20103]	7
1.1.19 Additional view in the AID (Active Info Display) [SFD: no].....	8
1.1.20 Golf 8 GTE (Hybrid) view in the AID (Active Info Display) [SFD: no]	8
1.1.21 Golf 8 GTI view in the AID (Active Info Display) [SFD: no]	8
1.1.22 Golf 8 R view in the AID (Active Info Display) [SFD: no].....	9
1.1.23 Off-road view in the AID (Active Info Display) [SFD: no].....	9
1.1.24 Steering angle display in the AID info window [SFD: yes].....	9
1.1.25 Boost pressure display in the AID info window [SFD: yes]	9
1.1.26 G-force display in the AID info display window [SFD: yes]	10
1.1.27 Torque display in the AID info display window [SFD: yes]	10

1.1.28	Engine power display in the AID info display [SFD: yes]	10
1.1.29	Transmission temperature display in the AID info window [SFD: yes]	10
1.1.30	Lap timer with lap counter [SFD: yes]	10
1.1.31	Refuelling amount in the AID (Active Info Display) [SFD: no]	10
1.1.32	Change max speed of the speedometer [SFD: yes]	10
1.1.33	Customize logo in the AID (Active Info Display [SFD: no]	11
1.1.34	Deactivate seatbelt warning [SFD: yes]	11
1.1.35	Change outside temperature warning threshold in the AID (Active Info Display) [SFD: no].....	11
1.1.36	Disable beeping when engaging reverse gear (DSG in „R“) [SFD: no]	11
1.1.37	Disable animation when switching AID displays [SFD: yes]	11
1.1.38	Deactivate start-stop system [SFD: yes]	12
1.1.39	Navigation map on both AID and infotainment display simultaneously [SFD: yes]	12
1.1.40	Deactivation of input blocking during driving in the navigation system [SFD: yes].....	12
1.1.41	Driving instructor mode [SFD: yes]	12
1.1.42	Automatic opening/closing of windows when opening/closing door [SFD: no]	12
1.1.43	Adjust lane-keeping assistant intervention point [SFD: no]	13
1.1.44	Save lane-keeping assistant settings (on ignition change) [SFD: no].....	13
1.1.45	Travel-Assist steering intervention, which is necessary to make the message “Take over steering” disappear, adjustable via Car-Menu [SFD: no].....	13
1.1.46	Activate acceleration measurement 0-100km/h, 80-120km/h and 1/4 mile [SFD: yes]	13
1.1.47	Adjust start button illumination [SFD: no] [Login Code: 10587].....	14
1.1.48	Comfort open-close sunroof with remote control [SFD: no]	14
1.1.49	Adjust or deactivate engine sound generator [SFD: no].....	14
1.2	Untested:	15
1.2.1	Deactivate online unlocking of the central locking [SFD: yes] <input type="checkbox"/>	15
1.2.2	Enable garage door opener [SFD: ???] <input type="checkbox"/>	15
1.2.3	30 ambient colors [SFD: ???] <input type="checkbox"/>	15
1.2.4	Disable warning that the lights are turned off [SFD: ???] <input type="checkbox"/>	15
1.2.5	Change timing of upcoming service notification [SFD: ???] <input type="checkbox"/>	15
1.2.6	Open Trunk with Vehicle Key [SFD: ???] <input type="checkbox"/>	15
1.2.7	Improve Sound Quality without Harman/Kardon Sound System [SFD: ???] <input type="checkbox"/>	16
1.2.8	Keep lights off as it gets dark [SFD: ???] <input type="checkbox"/>	16
1.2.9	Adjust seat heating temperatures [SFD: ???]	16
1.3	No function or changes:	18
1.3.1	Display ventilation level in „Auto“ mode [SFD: no]	18
1.3.2	Display lap timer on the head-up display [SFD: no].....	18
1.3.3	Change comfort flashing cycles [SFD: yes].....	18
1.3.4	Make the turn signals flash when locking and unlocking the vehicle [SFD: yes]	18
1.3.5	Adjust coming home and leaving home [SFD: yes].....	18

1.3.6	Coming home and leaving home also during the day (light switch position on "Auto") [SFD: yes]	18
1.3.7	Light strip (between the headlights) as daytime running lights [SFD: yes]	19
1.3.8	Deactivate light strip (between the headlights) [SFD: yes].....	19
1.3.9	Switch central locking with key even when ignition is on [SFD: yes].....	19
1.3.10	Automatic locking (if forgetting to lock the car) [SFD: yes]	19
1.3.11	Torque distribution display in the AID info window [SFD: yes]	20
1.3.12	Display driving profile in the AID (Active Info Display) [SFD: yes].....	20
1.3.13	Extended scales in the speedometer [SFD: no]	20
1.3.14	Display images from USB stick [SFD: yes]	20

2.2 45-watt USB module [SFD: no]

Parts list:

- Front USB module: 5NA035700
- Connector for front: 8K0973754C (Coupling for old connector 8K0972994B)
- Pins: N 907647.01 (For coupling N 907648.01) MQS contacts
- Rear USB module: 2G6035718

The connector for the front USB module must be replaced, and the wiring must be changed as follows:

At the rear, the USB module can be replaced 1:1.

2.3 Golf 8 R mode button on the steering wheel (in progress) [SFD: yes]

Required items:

- Buttons from Golf 8 R 1EA959442C or 1EA959442F (successor)
- Original dataset from the vehicle for gateway 0019
- Text editor, for example, Notepad++
- Dongle + software for flashing and unlocking the dataset with SFD

Installation:

1. Disconnect the battery
2. Remove the airbag from the steering wheel
3. Take out the steering wheel trim
4. Remove the button on the left side of the steering wheel
5. Install the new button and reassemble in reverse order
6. Take a short drive after reconnecting the battery, after that turn the ignition on/off and the error messages will be gone

Open the following dataset in a text editor:

„DA_0019_7208_5H0_XXXX_010FPA000003_MQB37XXXXNBR.xml“

Variables in the filename:

XXXX → Dataset version

XXX → Vehicle type (for example, GTI or R)

5H0 → Body variant

NBR → ???

The following code block needs to be modified:

After 3.962 characters, starting from the beginning of the code, the data block (184 characters long) begins with „FA“.

FA → Start of the code block

XX → Depending on the vehicle's configuration

XX → Modify

The last 8 characters form the checksum of the entire data block. It must be recalculated when making changes ([see point 4](#))

FA **XX** XX XX XX XX
XX XX XX XX XX XX **XX** XX XX XX XX XX **XX** XX XX XX XX
XX XX XX XX XX XX **XX** XX XX XX XX
XX **XX** XX XX

The following needs to be changed:

01: XX → FD	02: XX → 01	03: XX → 01
04: XX → 03	05: XX → 00	
06: XX → 08 (Only in Nürburgring mode)		
07: XX → 07 (Only in Nürburgring mode)		
08: XX → FA	09: XX → 70	

One must pay attention to the order of driving modes, as otherwise, when switching between driving modes, the sequence may not be correct.

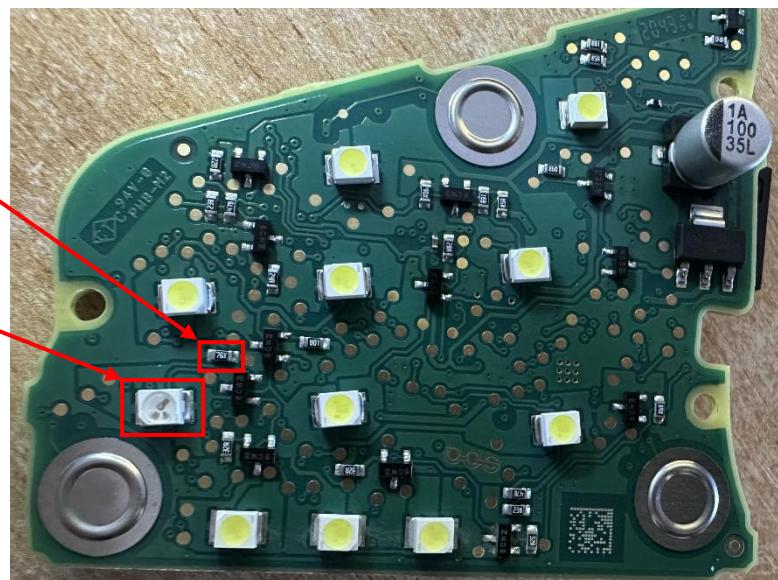

Then upload the modified dataset. The gateway must be unlocked for the upload by using SFD.

The memory address is: **7208** and the login code is: **20103**

Alternatively:

- Engrave the cover with the respective logo. The cover works with every revision and doesn't need to come specifically from the Golf R
- On the circuit board of the Golf 8 R's keypad, replace the following components:

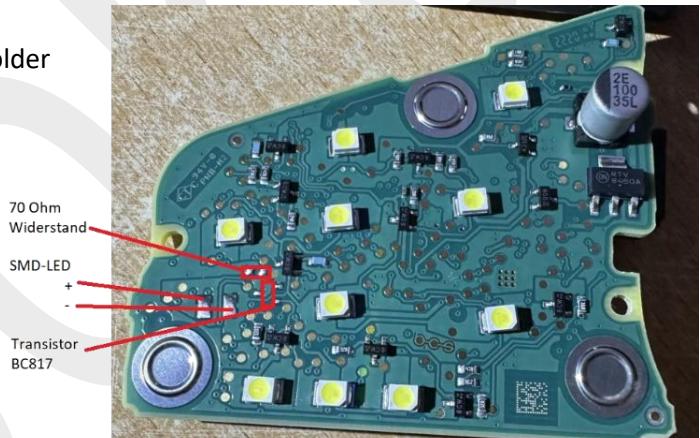

- 1x SMD 0603 resistor 120 ohms
The size of the resistor depends on the chosen LED.
- 1x SMD 3430 LED red
(For GTI, for example)

Alternatively, use your own circuit board and solder the following components:

- 1x SMD 3430 LED red
- 1x SMD resistor 70 ohms
- 1x Transistor BC817

But without flashing the corresponding firmware, it won't work.

Do not spend money on the China versions.

There, the logo was engraved, and the 3 components were soldered. It won't work without the appropriate firmware on the chip. The LED also does not light up.

Datensatzkonfigurator: https://drive.google.com/file/d/1TO-m19At11qjMEcr_ZXCuP6IWgQew0UI/view

3 Unlocking VIM (Video in Motion) [SFD: yes]

[Source](#)

You will need:

- [Dataset configurator](#) or text editor with the original dataset.
- With the dataset configurator, you can create a dataset without the original dataset. Simply click on "Export"
- Dongle + software to upload and unlock the dataset with SFD.

With the [dataset configurator](#), you can also easily export a dataset without needing the original one.

The following existing dataset can be imported/edited:

„DA_005F_720D_3G0_ER11_GESCHWABSCHW_EURDWABKW2520.xml“

The following code block can be adjusted:

45523131 00 00 06 02 06 02 0000 000A 06 02 06 02 FF 00 06 02 06 02 06 02 FF 00 0007 71D6FE2D

45523131	- Dataset version 45523131 = ER11
00	- Video/Mirrorlink deactivation threshold 00 = 0 km/h Some FW max. 127 km/h
00	- Video/Mirrorlink hysteresis 00 = 0 km/h
06	- Setup-Menu (Car-Menu) deactivation threshold 06 = 6 km/h
02	- Setup-Menu (Car-Menu) hysteresis 02 = 2 km/h
06	- DAB slideshow deactivation threshold 06 = 6 km/h
02	- DAB slideshow hysteresis 02 = 2 km/h
0000	- DAB slideshow update rate 1 0000 = 0 seconds
000A	- DAB slideshow update rate 2 000A = 10 seconds
06	- Manual deactivation threshold 06 = 6 km/h
02	- Manual hysteresis 02 = 2 km/h
06	- Route guidance deactivation threshold e 06 = 6km/h
02	- Route guidance hysteresis 02 = 2 km/h
FF	- Broadcast-Website (Browser) deactivation threshold FF = 255 km/h
00	- Broadcast-Website hysteresis 00 = 0 km/h
06	- Destination input deactivation threshold 06 = 6 km/h
02	- Destination input hysteresis 02 = 2 km/h
06	- Bluetooth paring deactivation threshold 06 = 6 km/h Some FW max. 180 km/h
02	- Bluetooth paring hysteresis 02 = 2 km/h
06	- Message input deactivation threshold 06 = 6 km/h
02	- Message input hysteresis 02 = 2 km/h
FF	- Radio text (RDS) deactivation threshold FF = 255 km/h
00	- Radio text (RDS) hysteresis 00 = 0 km/h
0007	- Radio text update rate 0007 = 7 seconds
71D6FE2D	- CRC-32 checksum must be recalculated when making changes (See point 6)

In general, the following applies:

FF = Always deactivated

FE = Always activated

The new dataset can be compiled as desired.

The infotainment control unit must be unlocked for upload using SFD.

The memory address is: **720D** and the login code is: **20103**

Link for the configurator v1.05:

https://drive.google.com/file/d/1TO-m19At11qjMEcr_ZXCuP6IWgQew0UI/view

4 Changing comfort turn signal cycles to 2 - 5 [SFD: yes]

You will need the following:

- Original dataset from the vehicle for the Body Control Module (BCM) 0009
- [Dataset configurator](#) or a text editor, such as Notepad++
- Dongle + software for uploading and unlocking the dataset using SFD

The following existing dataset can be imported/edited:

„A_009_7237_5H0_ZG05_202002270000_LISIRECAS.xml“

The following code block can be adjusted:

5A 47 30 35 -> Here ZG05

32 30 32 30 30 32 32 37 30 30 30 30 -> Here 202002270000

XX XX XX XX -> CRC32 checksum, must be recalculated for any changes ([See point 6](#))

XX -> Depends on the vehicle's configuration

XX -> Modify (07 = 2, 47 = 3, 87 = 4, C7 = 5)

5A 47 30 35 32 30 32 30 30 32 32 37 30 30 30 30 XX
XX
XX
XX
XX
XX
XX
XX XX

The calculated checksum will be replaced in the modified dataset with the old checksum. [See point 6](#) for the checksum calculation.

Afterwards, upload the modified dataset. The BCM must be unlocked for upload using **SFD**.

The memory address is: **7237** and the login code is: **20103**

For vehicles that are not connected to WeConnect by VW or should no longer be connected:

If the vehicle has not been connected to WeConnect by VW:

After uploading the dataset, the adaptation values in the BCM need to be reset.

STG 09 -> Basic Settings -> "Reset all adaptation values".

If the vehicle has been connected to WeConnect by VW and should no longer be connected:

After uploading the dataset, reset the infotainment to factory settings.

Setup -> Factory settings

For vehicles that should remain connected to WeConnect by VW:

1. Reset the infotainment to factory settings (Do not set up or connect yet!)
2. Remove the vehicle from your [WeConnect](#) account page (WeConnect contract will still remain, **but I cannot confirm the status of any purchases**)
3. Delete the WeConnect account with VW (Go to Settings -> Account Settings -> Delete User Account)
4. Create a new WeConnect account the following day (You can use the same email address as the old account)
5. Add the vehicle using its identification number
6. Enter your new WeConnect account details in the infotainment system (Not before)

Subsequently, the relevant data from the vehicle will be loaded into your account and profile, including the number of turn signal cycles in this case.

5 Start-Stop memory module

5.1 Option 1 (Memory module for the Golf 7 platform)

Possibly not possible for every BCM (Body Control Module), check pins beforehand)

Use the Start-Stop memory module from Golf 7 and connect it to the BCM as follows:

To BCM Pin T73b/60 (button) and Pin T73b/51 (status LED)

Then apply the following coding:

Control unit 09 [Tested SW: 0159-0161] [SFD: ???]

Funktion Cockpitaster 1:

Function_button_1: Start_stopp

5.2 Option 2 (Memory module for the Golf 8 platform)

Module 1: [Link](#)

Manufacturer: Speed Signal

Price: 141,61€ (as of 08.07.2023)

Instructions: [Installation instructions from the manufacturer](#)

Function: Deactivates the start-stop function every time the vehicle is started. Does not respond to changes in the start-stop function when switching driving modes.

Module 2: [Link](#)

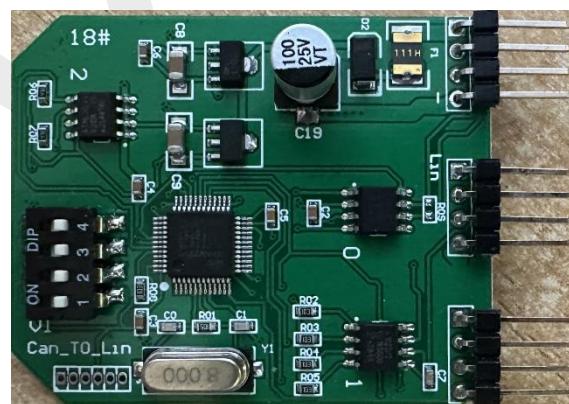

Manufacturer: VAGMEB (China)

Price: Ca. 50€ (Varies)

Instructions: -----

Installation report: For a Cupra Formentor (not by me): [Link](#)

Function: Deactivates the start-stop function every time the vehicle is started. Does not respond to changes in the start-stop function when switching driving modes.

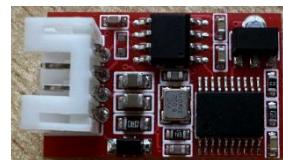

Module 3: [Link](#)

Manufacturer: China module

Price: Ca. 20€ (Varies)

Instructions: -----

Function: Deactivates the start-stop function every time the vehicle is started. Does not respond to changes in the start-stop function when switching driving modes.

Module 4: [Link](#)

Manufacturer: MTM

Price: 249€ (as of 08.07.2023)

Instructions: -----

Function: Unknown

Module 5: [Link](#)

Manufacturer: asr

Price: 199€ (as of 12.10.2023)

Instructions: ----- Will be provided by the manufacturer

Function: [Video from the manufacturer](#) (Saves lane-keeping assist and start-stop settings, must be adjusted via the steering wheel buttons, also works when changing driving profiles).

5.3 Option 3 (Coding)

Solvable via coding, see point [1.1.38](#)

6 Calculate CRC32 checksum

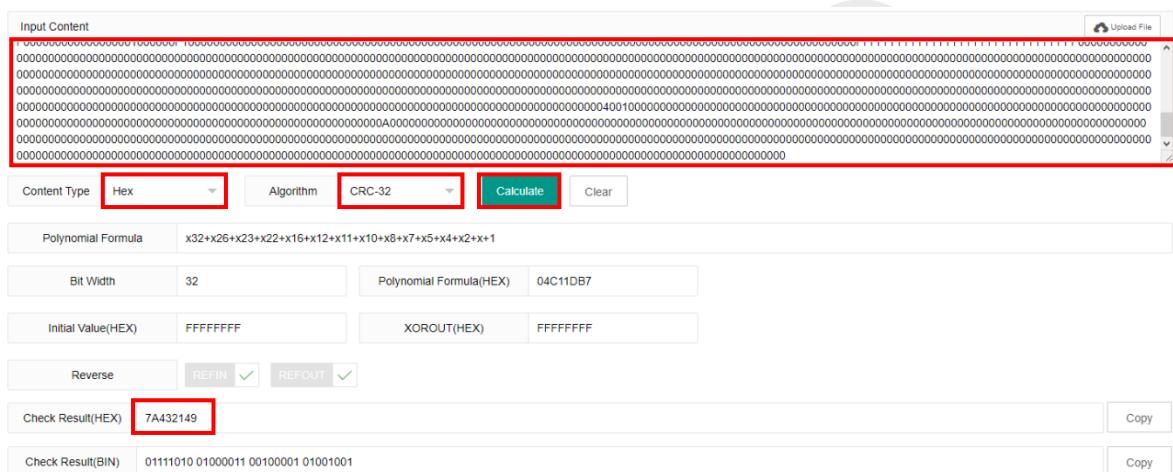

After a dataset has been modified, the last 8 characters must be replaced with a newly calculated checksum. Otherwise, the changes will not be accepted by the control unit.

There is a calculator available for this purpose, for example, on this website:
<https://www.lddgo.net/en/encrypt/crc>

You need to select „HEX“ for the „Content Type“ and set „CRC-32“ for the „Algorithm“.

The data block, except for the old checksum (last 8 characters), must be entered in the „Input Content“

After clicking the „Calculate“ button, the result will be displayed below as „Check Result(HEX)“.

Input Content

Content Type: Hex Algorithm: CRC-32 Calculate Clear

Polynomial Formula: $x^{32} + x^{26} + x^{23} + x^{22} + x^{16} + x^{12} + x^{11} + x^{10} + x^8 + x^7 + x^5 + x^4 + x^2 + x + 1$

Bit Width: 32 Polynomial Formula(HEX): 04C11DB7

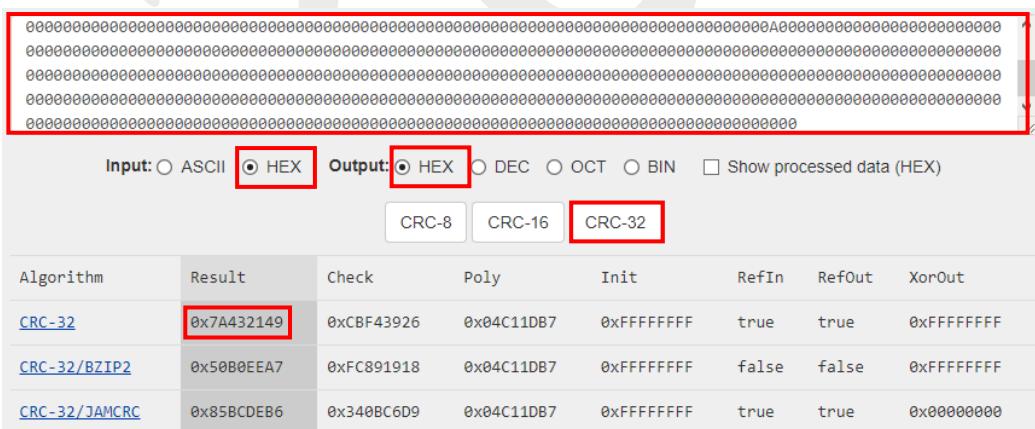

Initial Value(HEX): FFFFFFFF XOROUT(HEX): FFFFFFFF

Reverse REFIN REFOUT

Check Result(HEX): 7A432149 Copy

Check Result(BIN): 01111010 01000011 00100001 01001001 Copy

Alternative: You can also use <https://www.crccalc.com> for this purpose.

Input: ASCII HEX Output: HEX DEC OCT BIN Show processed data (HEX)

CRC-8 CRC-16 CRC-32

Algorithm	Result	Check	Poly	Init	RefIn	RefOut	XorOut
CRC-32	0x7A432149	0xCBFA3926	0x04C11DB7	0xFFFFFFFF	true	true	0xFFFFFFFF
CRC-32/BZIP2	0x50B0EEA7	0xFC891918	0x04C11DB7	0xFFFFFFFF	false	false	0xFFFFFFFF
CRC-32/JAMCRC	0x85BCDEB6	0x340BC6D9	0x04C11DB7	0xFFFFFFFF	true	true	0x00000000

You should copy the 8 characters after „0x“ here.

7 Modifications

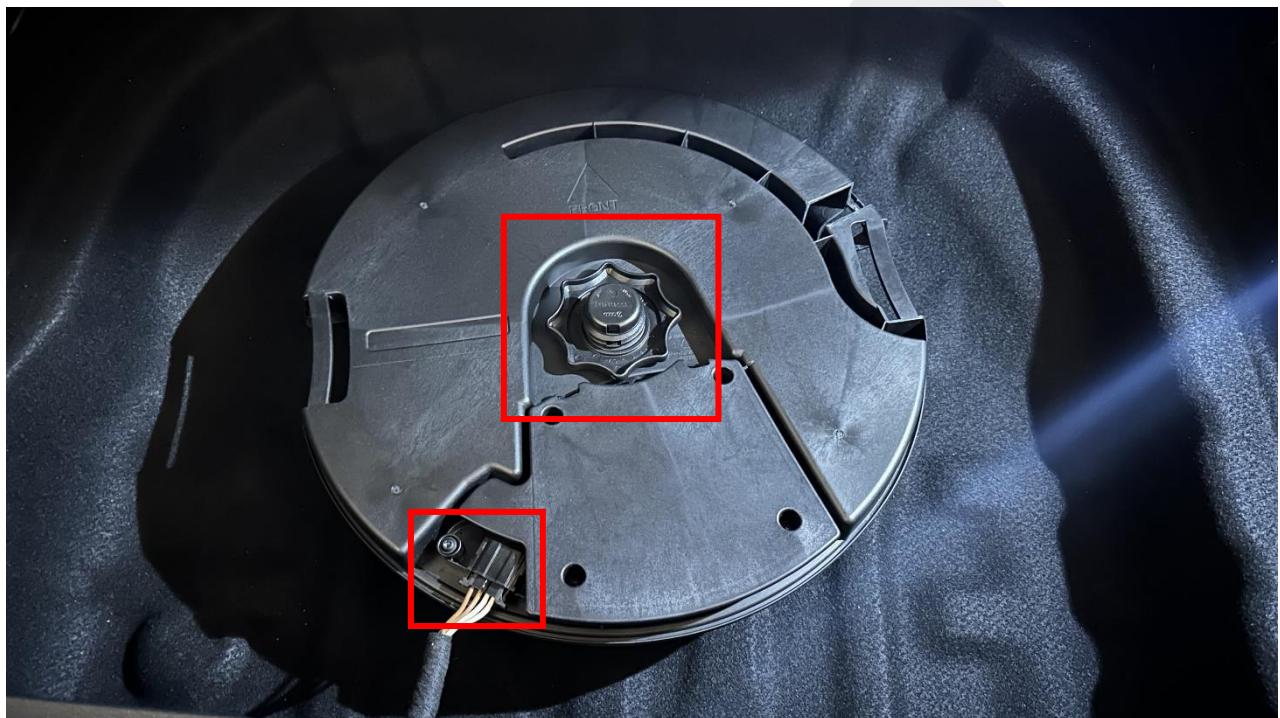

7.1 Enhancing Harman/Kardon OEM subwoofer

By making a simple modification to the subwoofer's enclosure, a significantly better bass can be achieved.

What is needed:

- A vibrating saw (narrow blade) or Dremel with the appropriate tool
- Trox 25 screwdriver
- Something for deburring
- Sandpaper

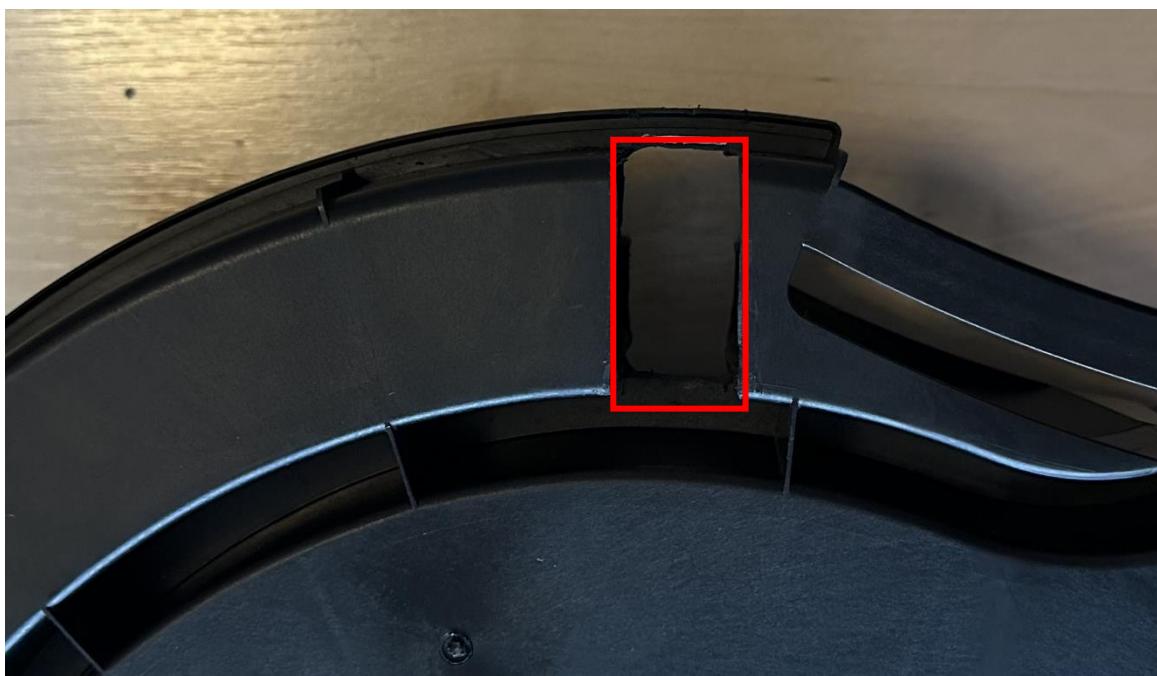

First, the subwoofer must be removed. It is located in the trunk under the floor in the cargo area. Then, disconnect the connector (push both retaining tabs inwards) and loosen the large plastic nut in the center. Now, the subwoofer can be taken out.

Next, the subwoofer must be removed from the enclosure. To do this, simply unscrew 5 screws (Trox 25). Then lift the speaker along with the plastic part.

Only the marked area needs to be cut out:

After cutting, there must be a hole leading into the interior of the enclosure for everything to work correctly:

Deburr everything and slightly sand the cut surfaces.

Clean the enclosure, including the inside. Then, the speaker can be reinstalled and screwed back in place.

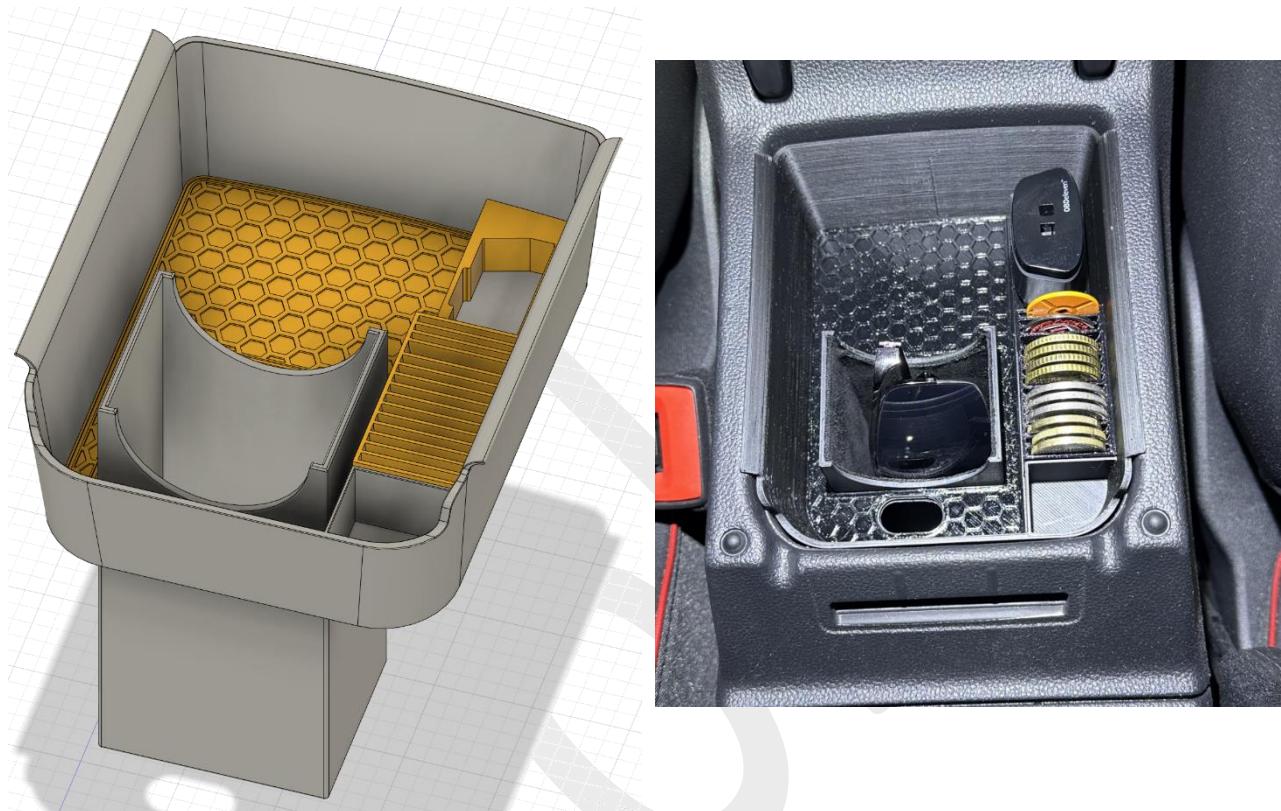

Now the subwoofer can be placed back into the vehicle.

7.2 Sunglasses compartment for the center console

Since VW did not provide a suitable space in the interior of the Golf 8 for sunglasses, I created my own solution and 3D-printed it.

The new sunglasses compartment is placed in the center console, beneath the elbow rest.

Additionally, I incorporated a coin holder and a parking spot for the OBDeleven device.

The grey parts shown here (2 parts) will be 3D-printed with ABS, ASA, or another heat-resistant material (as the interior can reach temperatures of around 60°C in the summer).

The parts shown in yellow will be 3D-printed with TPU to ensure there are no noise issues.

I lined the sunglasses compartment with felt.

Here is the link to the 3D-print files: <https://www.thingiverse.com/thing:6011038>

8 Maintenance

8.1 Releasing the rear electronic brake [SFD: yes]

1. Connect a battery charger
2. Turn on the ignition
3. Access Control unit 03 (ABS)
4. Go to „Basic Settings – 04“
5. Start the brake pad replacement mode

The brake cylinders should now open. They are fully open when there are no sounds (clear buzzing) coming from the brake cylinders.

Once this process is complete:

Select "Stop" to end the process

6. Now, you can turn off the ignition and begin working on the rear brakes.

Upon completion of the work:

1. Turn on the ignition
2. Access Control unit 03 (ABS)
3. Go to „Basic Settings – 04“
4. End the brake pad replacement mode

The brake cylinders should now close. They are fully closed when there are no sounds (clear buzzing) coming from the brake cylinders.

Once this process is complete:

Select "Stop" to end the process.

8.2 New battery calibration [SFD: yes]

Control unit 19

Adjustments:

Battery_Adaption (Batterieanpassungen):

Battery_capacity:

Battery_technology:

Battery_manufacturer:

Battery_serial_number:

Enter the battery capacity of the new battery.

Select the corresponding value of the new battery.

Enter the manufacturer of the new battery.

(Maximum 3 letters)

Enter the serial number of the new battery. If the new battery does not have a serial number, simply increment the last digit by 1 (e.g., 1111111111 -> 1111111112))

8.3 Replace the windshield wipers

Front wipers: Bosch Aerotwin A863S 650/450mm

Rear wipers: Bosch A252H 250mm

Bring the front wipers to the service position.

Method 1: Turn on the ignition and immediately turn it off, then push the wiper lever on the steering wheel downwards.

Method 2: Turn on the ignition, go to "Vehicle" in the HMI, then go to "Exterior" in the "Vehicle" tab, and scroll all the way to the right until "Service position" is displayed. Press "Service position" there.

8.4 Key battery replacement

What is needed:

- Pointed tool, such as a small screwdriver or similar
- CR2032 [button cell](#)

Insert a pointed tool between the chrome part and the back of the key and carefully pry it open. After that, the cover can be lifted gently.

Insert the screwdriver between the two retaining tabs, push the battery slightly away from the tabs, and lever it out.

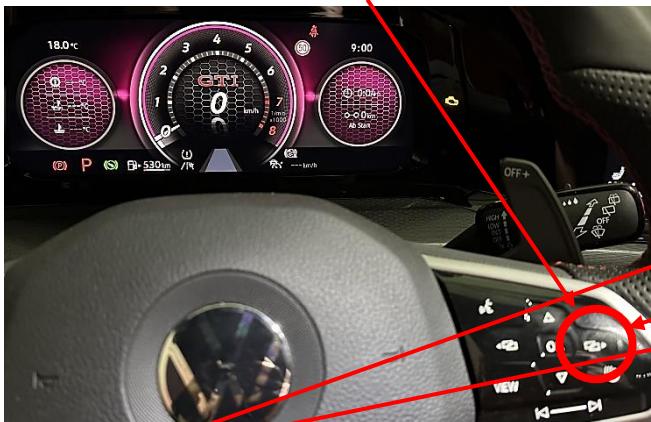

Insert the new battery and snap the cover back on.

Done.

9 Hidden menu's

9.1 Service menu instrument cluster (Reset service):

1. Turn on the ignition
2. Press the following button on the steering wheel once:

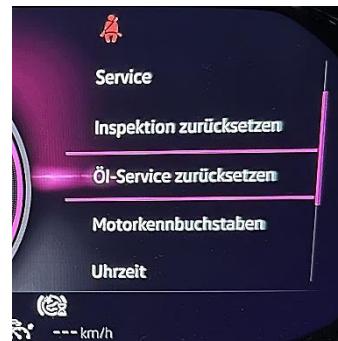

3. Navigate to the menu item „Travel time/distance“

4. Now hold down the following button for about 5 seconds and then release it.

5. Now the service menu appears on the instrument cluster.

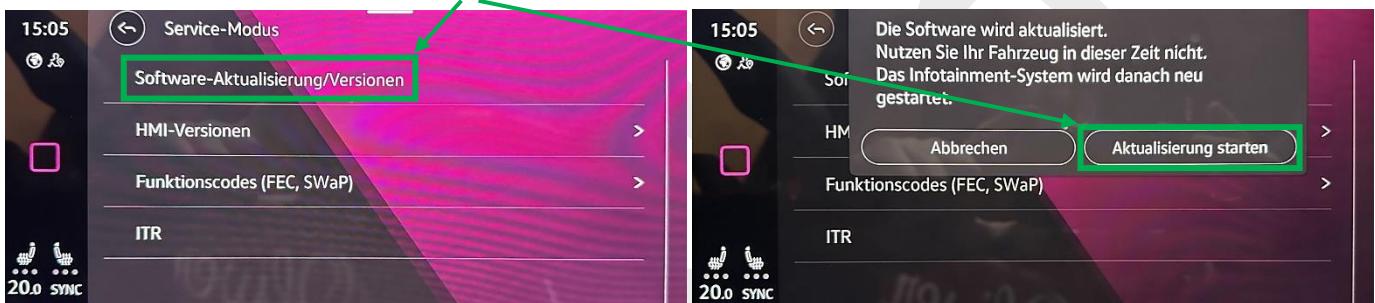

9.2 Service Menu Infotainment System (MIB3) (For Software Update):

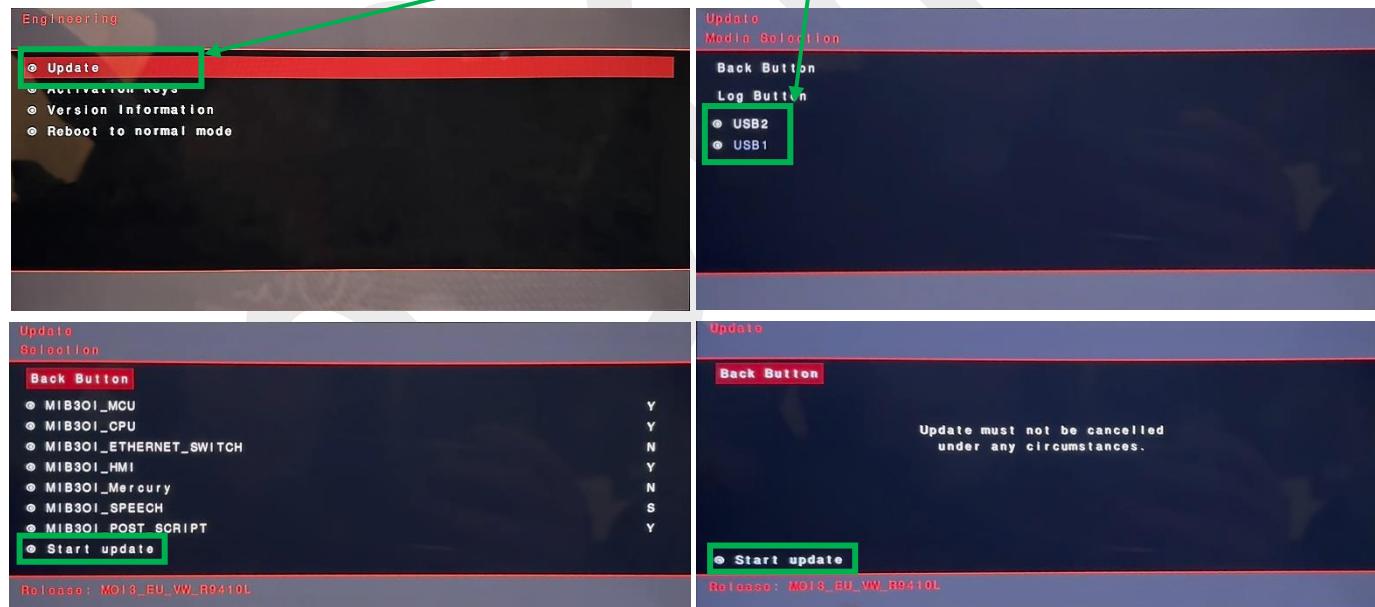

1. Press and hold the menu button for about 3 seconds.

2. Press here for a software update (**only if an update is inserted**)

3. To perform an update, press „Update“ and choose the source

4. Exit the menu and return to the normal user interface.

Video: <https://youtu.be/4AsSbGd3caU>

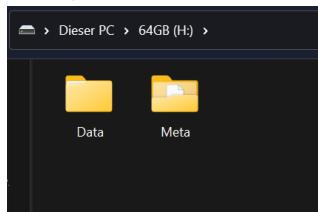

9.3 Radio station data update (Only for European vehicles)

1. Visit the website <https://www.phonestar.de/vw/de/download>
2. Enter the part number of your MIB3 unit below, search, and download.

The last letter practically doesn't matter, as the search result is always the same.

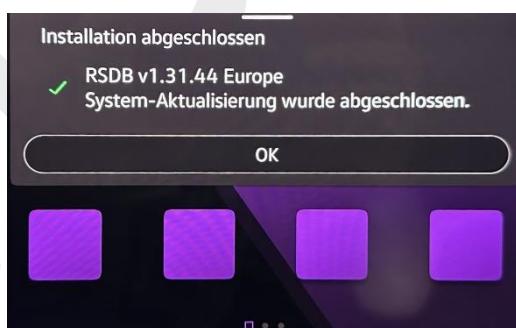

3. Unpack the downloaded file on a USB stick (preferably with a Type C connector or adapter). The USB stick can be formatted in FAT32, exFAT, or NTFS file format.

4. Plug the USB stick into the vehicle.
5. Click on "Start" and wait.

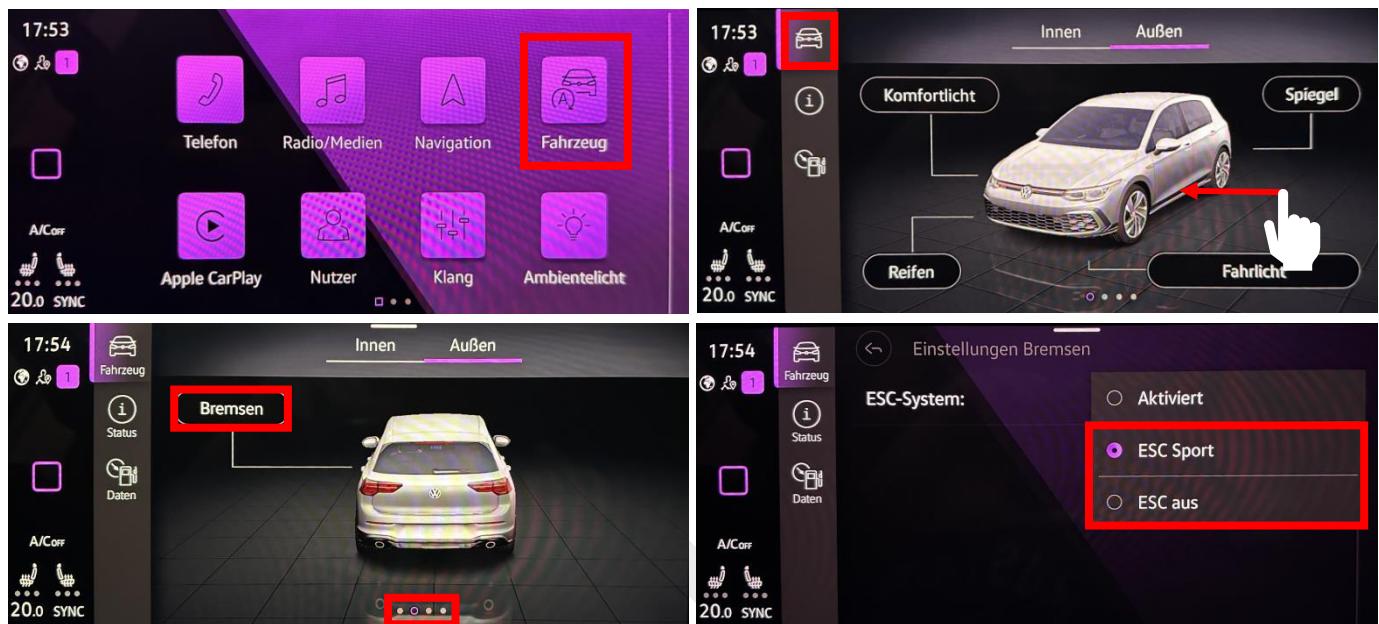

6. After the infotainment system has restarted, the following message should appear:

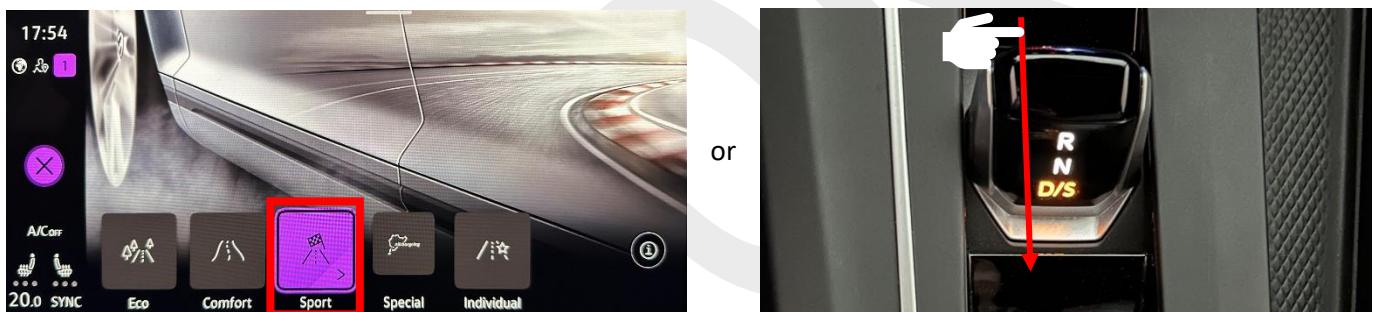

Done

10 Activate launch control

1. Turn off ESC or set it to "ESC-Sport."

2. Select Sport mode

3. Depress the brake pedal with your left foot and press the accelerator pedal with your right foot. The engine will rev up to a maximum of 4,000 RPM, and a message will appear on the dashboard.

When you release the brake pedal, the vehicle will move accordingly.

Note:

Does not work when...

- The engine is too cold.
- The engine is too hot.
- A trailer is attached.
- The steering wheel is not straight (steering angle).
- Manual transmission is present

11 Software updates (13.10.2023)

Updates executable, conditions for each update in red, **NOT SUITABLE FOR NOVICES!!!!!!**

5WD919298 SW 0230 → 5WA919298B SW 0578 (new Dataset, adjustments und coding need to be reapplied)

Control unit A5 (Front camera)

5WA980653A SW 3129 → 5WA980653C SW 3302 (new Dataset) → 3303 → 5WA980653D SW 3403 (new Dataset)

Control unit B7 (Interface for access and start system)

5WA959436C SW 0706 → 5WA959436J SW 0725

Control unit 8107 (Antenna)

5WA035741B SW 0081 → 0083

12 To do's

- Find the reason for the non-functioning time measurement
- Install WLAN hotspot (pictures will be provided).
- Retrofit electric tailgate in the short-wheelbase sedan (currently in the phase of finding suitable parts).
- Convert coupling antenna (3G0980611) for iPhone 12+ (First antenna already modified over a year ago, unfortunately without documentation).
- Display temperature in the AID from 0°C.
- Implement Area View 360° (still considering, as it requires some effort, but it is possible).

n3okaa

13 Detonations

If anyone would like to make a donation, you are welcome to do so voluntarily.
I'm adding this here because I have been asked about it several times.

<https://www.paypal.com/paypalme/n3okaa>

<https://www.buymeacoffee.com/n3oka>

Thank you =)
